**Religion, Spirituality and the Near-Death Experience** Jan 19 2023

This dramatic and sustained response to decades of research into near-death experiences (NDEs) is the first book to credibly bridge the gap between the competing factions of science and spirituality. Neither a religious argument touting NDEs as hard evidence for God, nor a scientific rebuke to religious interpretations, it balances investigation of these much-reported yet baffling phenomena, and brings fresh urgency to the study of our hopes for a life beyond.

New York City's municipal water supply system provides about 1 billion gallons of drinking water a day to over 8.5 million people in New York City and about 1 million people living in nearby Westchester, Putnam, Ulster, and Orange counties. The combined water supply system includes 19 reservoirs and three controlled lakes with a total storage capacity of approximately 580 billion gallons. The city's Watershed Protection Program is intended to maintain and enhance the high quality of these surface water sources. Review of the New York City Watershed Protection Program assesses the efficacy and future of New York City's watershed management activities. The report identifies program areas that may require future change or action, including continued efforts to address turbidity and responding to changes in reservoir water quality as a result of climate change.
